

Online documentation: <https://cpq.cotiza.dev>

This document describes solution architecture, information flow, authentication, encryption, data touchpoints, and basic usage instructions.

Lightning Experience	Required UI platform; app tabs and
Apex	Server-side rules, sync, approvals
Custom objects	Playbook configuration and transac
Custom Metadata Types	Quote/Opportunity/Entitlement fiel
Standard objects	Quote, Opportunity, Contract, Prod
Visualforce	Word proposal output; optional cus
Permission sets	Cotiza CPQ User, Cotiza CPQ Admin
SOQL	Record lookup questions; proposal

3. Information Flow

3.1 End-to-End Business Flow

1. Opportunity - User opens Cotiza CPQ from the app or Opportunity record page.
2. Quote creation - User creates a Quote and configures it through an active Playbook.
3. Playbook configuration - User answers questions; Playbook Rules evaluate Scenarios and update questions, products, and pricing in real time. Answers persist as Playbook Answer records and may stamp Quote fields.
4. Approval (conditional) - If Playbook Approvals are triggered, user submits the Quote. Apex creates Quote Approval, Step, and Approver records. Approvers act in the Approvals hub. Optional approval emails use Salesforce email delivery.
5. Proposal (optional) - User generates a proposal PDF (or Word for Proposal Power Users). Output is stored as ContentVersion linked to a Quote Proposal record.
6. Sync - User syncs the Quote. Apex maps Quote and Quote Line Item fields to Opportunity and Opportunity Products via Custom Metadata mappings and package defaults.
7. Contract - When Create Contract on Opportunity changes from false to true, Apex creates Contract, Contract Entitlement, and Contract Playbook Answer records.
8. Renewals / amendments - User launches Amend, Replace, or Renew from the Contracts UI to create contract-sourced Quotes.

3.2 Data Flow Diagram

3.3 Configuration-to-Runtime Flow

Step	Source	Target	Mechanism
Quote UI rendering	Playbook, Questions, System Settin	Lightning components	SOQL/DML in Apex; client reads con
Rule execution	Playbook Rule + Scenario	Quote, Answers, Line Items	Apex rules engine on configured tr
Approval enforcement	Playbook Approval	Quote Approval records	Apex on submit
Proposal rendering	Playbook View Section	ContentVersion / Quote Proposal	Apex + Visualforce (PDF/Word)
Quote sync	Quote, Quote Line Item	Opportunity, Opportunity Product	Apex + Opportunity/OppLineItem Fie
Contract creation	Opportunity Product, Quote answers	Contract, Entitlement, Contract PI	Apex trigger on Create Contract fl

4. Authentication

Cotiza CPQ does not implement a separate identity provider or authentication system.

Topic	Implementation
User authentication	Standard Salesforce login (username and password)
Session management	Salesforce platform session tokens
Authorization	Salesforce profiles, permission sets
Cotiza access control	Cotiza CPQ User and Cotiza CPQ Admin
API access	Lightning components require the user to be authenticated
Approver resolution	Named User references and/or Opportunity
External credentials	None stored by the Cotiza managed package

Users must be authenticated to Salesforce before any Cotiza CPQ UI or Apex logic is accessible. All access checks occur within the customer's org security model.

5. Encryption and Data Transfer

5.1 Data in Transit

Path	Encryption
User browser to Salesforce (Lightning)	TLS/HTTPS (Salesforce platform standard)
Apex execution	In-platform; no external HTTP call
Approval notification emails	Delivered via Salesforce email infrastructure
Proposal download links	Salesforce ContentVersion / ContentLink

Cotiza CPQ does not initiate outbound connections to external Cotiza-operated endpoints during normal quoting, approval, sync, or proposal operations.

5.2 Data at Rest

All Cotiza CPQ data is stored on Salesforce objects within the customer's org. Encryption at rest follows the customer's Salesforce edition and configuration:

- Platform encryption (if enabled by the customer)
- Salesforce data center protections and certifications inherited by the org

The managed package does not store customer data outside Salesforce.

5.3 External Transmission

External data transmission may occur only when the customer explicitly configures Salesforce platform features or customizations, for example:

- Email notifications to approvers or submitters
- Content distribution or file sharing links
- Custom Apex, Flow, or integration built by the customer

These transmissions are governed by the customer's Salesforce org settings, not by Cotiza-operated infrastructure.

6. Data Touchpoints

6.1 Systems and Services

System / Service	Role	Customer data stored?	Normal operation connection?
Customer Salesforce org	Application host, database, UI, lo	Yes - all Cotiza data	Yes - sole runtime environment
Cotiza external servers	None	No	No
Salesforce email	Approval notifications (optional)	Email content in transit	Optional - customer-configured
Customer custom integrations	Optional extensions	Depends on customer	Optional - customer-built

6.2 Salesforce Object Touchpoints

Standard objects read or written:

Object	Typical operations
Quote	Create, read, update (primary outp
Quote Line Item	Create, read, update, delete
Opportunity	Read; update on sync
Opportunity Line Item	Create, update on sync
Product2, Pricebook2, PricebookEnt	Read (catalog)
Contract	Create, read, update
User	Read (approvers, owners, submitter
Account	Read (context)
ContentVersion	Create (proposal files)

Custom objects (Cotiza namespace) - configuration:

System Settings, Playbook, Playbook Question Group, Playbook Question, Playbook Scenario, Playbook Scenario Criterion, Playbook Rule, Playbook Rule Action, Playbook Rule Calculation Item, Playbook Approval, Playbook Approver Group, Playbook Approver, Playbook View Section, Pricing Set, Pricing Threshold

Custom objects (Cotiza namespace) - transaction:

Playbook Answer, Quote Approval, Quote Approval Step, Quote Approver, Quote Proposal, Contract Entitlement, Contract Playbook Answer

Custom Metadata Types:

Opportunity Field Mapping, OppLineItem Field Mapping, Entitlement Field Mapping, Entitlement Combination Mapping

6.3 Data Touchpoint Summary Table

Data category	Examples	Stored where	Leaves org in normal ops?
Quote configuration	Answers, line items, pricing	Quote, Playbook Answer, Quote Line	No
Approval data	Status, approver, notes, reasons	Quote Approval records	No (email optional)
Proposal documents	PDF, Word files	ContentVersion, Quote Proposal	No (unless customer shares link)
Admin configuration	Playbooks, rules, approvals	Cotiza admin custom objects	No
Synced deal data	Opp fields, products	Opportunity, Opportunity Product	No
Contract data	Entitlements, contract answers	Contract, Contract Entitlement	No

7. Basic Usage Instructions

7.1 Prerequisites

- Salesforce Professional, Enterprise, Unlimited, or Developer Edition
- Lightning Experience enabled
- Standard Quote object enabled (Setup -> Quote Settings)
- Cotiza CPQ managed package installed from AppExchange

7.2 Initial Setup (Administrator)

1. Install Cotiza CPQ from AppExchange (recommend sandbox first).
2. Assign Cotiza CPQ Admin permission set to the implementing admin.
3. Create a System Settings record (App Launcher -> Cotiza CPQ System Settings).
4. Configure Products, Price Books, and Price Book Entries.
5. Create a Playbook linked to a Price Book; add Questions, Rules, Approvals, and View Sections as needed.
6. Assign Cotiza CPQ User permission set to sales users and approvers.
7. Add Cotiza CPQ Container to Opportunity record pages via Lightning App Builder.
8. Validate an end-to-end test Quote through sync (and contract creation if applicable).

Estimated time: package install 5?15 minutes; initial configuration 1?4 hours depending on complexity.

7.3 Sales User Workflow

1. Open an Opportunity in Cotiza CPQ (app tab or record page component).
2. Click Create + to start a new Quote.
3. Complete the Playbook configuration wizard (questions, products, pricing).
4. Submit for approval if the Approval Summary indicates approvals are required.
5. Generate a proposal PDF when configuration is complete and approvals are satisfied.
6. Sync the Quote to update the Opportunity and Opportunity Products.
7. After deal close, an admin or automated process sets Create Contract on the Opportunity.
8. For ongoing relationships, use Amend, Replace, or Renew from the Contracts tab.

7.4 Approver Workflow

1. Open Cotiza CPQ Approvals tab (or follow approval email link if configured).
2. Filter to assigned or submitted approvals.
3. Review Quote context, approval reason, and submitter notes.
4. Approve or Reject with an optional decision reason.

7.5 Roles and Permissions

Role	Permission set	Typical activities
CPQ administrator	Cotiza CPQ Admin	Playbooks, rules, approvals, syste
Sales rep	Cotiza CPQ User	Create quotes, submit approvals, g
Approver	Cotiza CPQ User	Approve/reject in Approvals hub
Deal desk (optional)	Cotiza CPQ User + Proposals Power	Word proposals, redlines
Operations (optional)	Cotiza CPQ User + Contracts Power	Void contracts

8. Audit and Compliance Notes

- Approval decisions, Quote changes, and Contract events are persisted on Salesforce records.
- Customers may enable Field History Tracking and use standard Salesforce reporting for audit trails.
- Apex is bulkified; CRUD and FLS enforced via with sharing patterns.
- Customers remain responsible for org-wide security policies (MFA, IP restrictions, data retention).
